

---

# Brand Identity

Warm Dispatch — the colour, type, logo and voice that make every EchoBrief surface look like it came from the same place.

# Warm dispatch

A dispatch is a report filed from where the work happened — brief, factual, sent onward. EchoBrief is a working instrument, not a showpiece, and the identity follows: warm, plain, and quiet enough that the meeting content is the loudest thing on screen.

## WARM, NEVER GREY

Paper and charcoal are both warm-tinted. Meetings are human; a cool-grey product reads like a database console.

## ONE SIGNAL COLOUR

Ember marks what is interactive or live. Used everywhere, it means nothing — so it appears once per view.

## SOUND IS THE ONLY METAPHOR

Rings, ripples, waveform bars. No brains, no sparkles, no robots, no circuit-board texture.

## What this kit contains

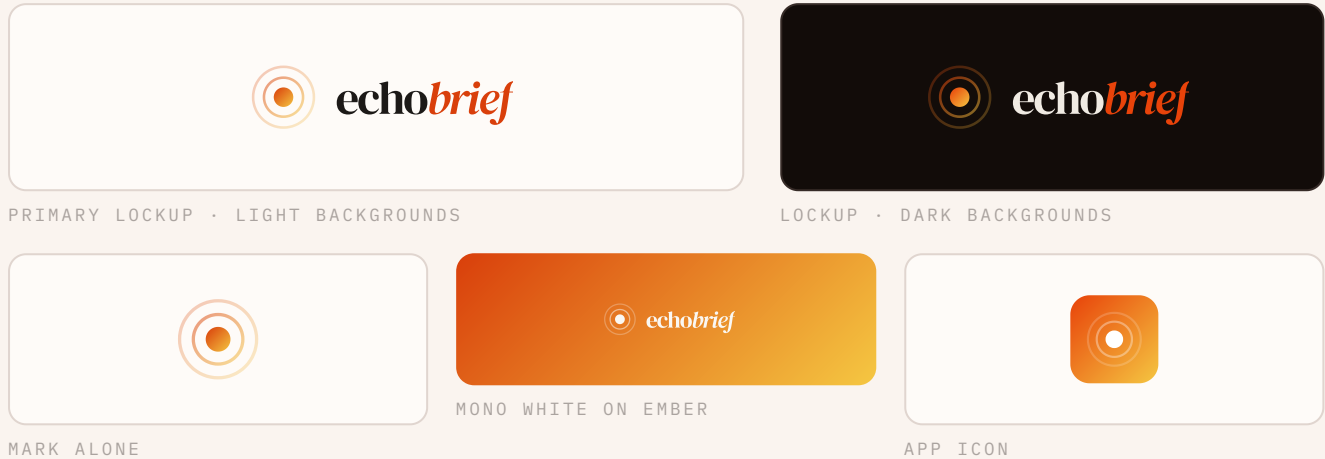

|            |                                                                                                   |
|------------|---------------------------------------------------------------------------------------------------|
| Logo       | Construction, the eight approved files, clear space, minimum sizes, and the don'ts.               |
| Colour     | Ember and gold, warm paper and char neutrals, semantic status, and every measured contrast ratio. |
| Typography | Two stacks — Switzer in-app, DM Serif Display + Manrope on brand surfaces — plus the Indic set.   |
| Interface  | The five signature details, buttons, icons, surfaces and motion.                                  |
| Voice      | How EchoBrief writes, and the words it never uses.                                                |

### WHERE THE TRUTH LIVES

The app implements this system in `src/index.css` and `src/components/ui/Logo.tsx`. This document describes that implementation and makes it portable to decks, email, print and partner surfaces. Machine-readable tokens ship alongside it as `brand/tokens/colors.json` and `colors.css`. If a value ever disagrees, the app wins — then fix the token file.

# Three ripples and a core

Sound leaving a source — and attention narrowing to a point. The ripples fade outward at 28% and 52% opacity so the core always wins the eye.

## Construction

Drawn on a 32-unit grid, filled with the ember→gold gradient. In the lockup the mark scales 1.5× against 32px type.

|            |                                  |
|------------|----------------------------------|
| Outer ring | r 14 · stroke 1.2 · opacity 0.28 |
| Inner ring | r 9 · stroke 1.2 · opacity 0.52  |
| Core       | r 4.5 · solid                    |

## Wordmark

DM Serif Display, 32px, tracking -0.04em. **echo** roman in ink, *brief* italic in ember. The italic is the whole idea: the echo is plain, the brief is the emphasis.

## Clear space & minimum size

Clear space on all four sides equals the diameter of the core — 28% of the mark's height. Nothing enters that zone.

| ASSET       | SCREEN | PRINT |
|-------------|--------|-------|
| Full lockup | 120px  | 32mm  |
| Mark alone  | 24px   | 8mm   |
| App icon    | 16px   | —     |

Below 24px the outer ring disappears — use the app icon instead, which holds to 16px.

### DO

Use the supplied files. Mono white over photography and over ember. Give it the full clear space, even when the layout is tight.

### DON'T

Rebuild the wordmark in another font · set *brief* in roman · recolour or re-opacity individual rings · stretch, rotate or arc · add shadows, glows or outlines · crop the rings.

# Ember on warm paper

One signal colour, one accent, and a warm neutral field. Status colour is never brand colour — the moment ember also means “recording”, both meanings die.

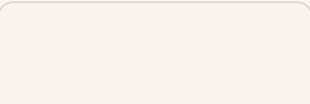

## BRAND

|                                                                                                                                            |                                                                                                                                                            |                                                                                                                                                       |                                                                                                                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
|  <p><b>ember</b><br/>#D93F0B<br/>Primary — light mode</p> |  <p><b>ember · dark</b><br/>#E8430A<br/>Primary — dark mode, app icon</p> |  <p><b>ember-deep</b><br/>#B83508<br/>Pressed · ember body text</p> |  <p><b>gold</b><br/>#F5C842<br/>Accent · gradient end</p> |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|

linear-gradient(135deg, #D93F0B 0%, #F5C842 100%)

Reserved for the logomark, app icon, hero CTA, and the 4px signature bar on section headers. That is the entire list.

## NEUTRALS — LIGHT

|                                                                                                                                   |                                                                                                                                       |                                                                                                                                |                                                                                                                                     |

# Contrast, measured

WCAG 2.1 ratios against the surfaces these colours actually sit on. Two facts are worth memorising: ember on paper is 4.1:1, so it is a large-text and UI colour, not a body-copy colour — and gold on light is 1.5:1, so gold is a fill, never text.

| PAIR                                                                                                  | RATIO | VERDICT                 |
|-------------------------------------------------------------------------------------------------------|-------|-------------------------|
|  ink on paper        | 17.3  | AAA                     |
|  ink-mid on paper    | 8.5   | AAA                     |
|  ink-soft on paper   | 3.9   | Large text · UI         |
|  ink-faint on paper  | 2.3   | Decorative only         |
|  ember on paper      | 4.1   | <b>Not body text</b>    |
|  ember-deep on paper | 5.4   | AA — use for ember copy |
|  white on ember      | 4.5   | AA, exactly             |
|  gold on paper       | 1.5   | <b>Never</b>            |

| PAIR                                                                                                 | RATIO | VERDICT            |
|------------------------------------------------------------------------------------------------------|-------|--------------------|
|  bone on char       | 16.2  | AAA                |
|  bone-mid on char   | 9.7   | AAA                |
|  bone-soft on char  | 5.3   | AA                 |
|  bone-faint on char | 3.0   | Large text · UI    |
|  ember on char      | 4.8   | AA                 |
|  gold on char       | 12.2  | AAA — dark only    |
|  ink on gold        | 11.9  | AAA — gold as fill |

## Tints, elevation, radii

### EMBER TINTS

|     |                       |
|-----|-----------------------|
| 7%  | Row hover, active row |
| 12% | Pill and badge fills  |
| 22% | Active card borders   |
| 40% | Focus rings           |

### SHADOWS

Warm, never neutral grey. **paper-sm/md/Lg** for surfaces; **ember** and **ember-Lg** for the primary CTA only. Elevation rises one step on hover, never two.

### RADII

|          |                      |
|----------|----------------------|
| 0.375rem | Small controls       |
| 0.625rem | Default card, button |
| 999px    | Pills                |
| 22%      | App icon squircle    |

### DO

One ember per view. Ink on gold when gold must carry text. Ember-deep for any ember-coloured body copy on light.

### DON'T

Fill a large surface with ember or the gradient · place ember beside stop-red · use ember for a status · introduce a cool grey · invent a shade that isn't in **colors.json**.

## Two stacks, kept apart

The app is a working tool and reads in one neutral sans. Brand surfaces carry a serif italic accent. Mixing the two is the single most common way to take this system off-brand.

### APP STACK

#### Switzer

Headings and body. 300–800, Fontshare. Feature settings `ss01 ss02 cv01` are part of the look.

JetBrains Mono — 09:41:22

Timestamps, transcripts, code.

### BRAND STACK

#### DM Serif Display *italic*

Display and accents only — never body copy.

#### Manrope

Body and UI on landing, decks, email, print.

IBM PLEX MONO

Eyebrows and small uppercase labels.

### SPECIMENS

BRAND DISPLAY · DM SERIF DISPLAY 400

Every meeting, *briefed.*

APP H1 · SWITZER 600 · -0.02EM

Weekly product sync

APP H2 · SWITZER 600

Decisions and action items

BODY · SWITZER 400 · 15PX / 1.6

The bot joined at 09:41 and recorded 47 minutes. Three decisions were made and six action items assigned, four of them to people who were not in the room.

NATIVE SCRIPTS · NOTO SANS · 16PX FLOOR

हर मीटिंग, संक्षेप में। · ஒவ்வொரு கூட்டமும், சுருக்கமாக.

### The italic accent

One italic DM Serif Display phrase inside an otherwise sans headline. It carries the *brief* half of the logotype into the copy. One per headline — two cancels the emphasis and reads like a template.

### Never

- DM Serif Display below 24px, or as body copy
- Switzer on brand surfaces, or Manrope inside the app
- Faked weights or skewed italics
- Positive tracking on lowercase — that's for uppercase mono only
- A heading set in the gradient

# Five signature details

These are what make a screen recognisably EchoBrief. Everything else is ordinary, on purpose.

## 1 • THE EYEBROW

### — HOW IT WORKS

IBM Plex Mono 10.5px, +0.22em, uppercase, ember, preceded by a 22px hairline. One per section — a marker, not a decoration.

## 2 • THE RECORDING PILL

### ● RECORDING

Ember tint fill, 25% ember border, pill radius, 7px dot blinking at 1.2s. Off under `prefers-reduced-motion`.

## 3 • THE WAVEFORM

Twelve 3px ember bars, staggered heights and durations. Live audio state only — never background art.

## 4 • STATUS DOTS

● scheduled ● upcoming ● recording

● processing ● completed ● failed

8px. Ember is never the recording colour.

## 5 • THE GRADIENT BAR

A 4px ember → gold rule above a section header or card. The only place the gradient touches a layout.

## Buttons

Start recording

Save

Cancel

Learn more

Radius `0.625rem`, weight 500. Hover moves to `ember-hi`, pressed to `ember-deep`. Gradient fill is the hero CTA only; it carries `--shadow-ember`, nothing else does.

## Icons, surfaces, motion

**Icons** — Lucide React, stroke 1.75, sized to the text beside them: 14px dense UI, 18px feature cards, 24px standalone. Never mix stroke weights in one view.

**Surfaces** — card fill, 1px rule border, `0.625rem` radius, warm small shadow. A neutral grey shadow reads as a foreign component.

**Motion** — interface transitions 150–200ms ease; brand motion loops slowly at 1.2–2.8s because it signals *live*, not *look at me*. Everything has a reduced-motion off-switch.

## Say what happened

Conversational, not corporate. Outcome first — lead with what the user gets, not what the system does. Confident without superlatives. Specific about India: name the languages, say WhatsApp, price in ₹.

### WRITE

Every meeting, *briefed*. Bot joins, records, and files the notes before you're out of the room.

### DON'T WRITE

EchoBrief is a cutting-edge, AI-powered meeting intelligence platform that revolutionises how teams capture insights!

Banned: "AI-powered", "cutting-edge", "next-gen", "revolutionary", "seamless", "unlock". No exclamation marks. Error messages say what happened and what to do — and never apologise twice.

## Ten that break the brand if ignored

1. One ember per view.
2. Ember never means a status. Recording is stop-red, not ember.
3. No cool greys, ever. Every neutral here is warm-tinted.
4. Gradient only on: logomark, app icon, hero CTA, 4px section bar.
5. Gold is a fill, not a text colour on light.
6. No serif inside the app; no Manrope outside brand surfaces.
7. One italic phrase per headline, one eyebrow per section.
8. Never rebuild the wordmark — use the supplied files.
9. Every motion has a reduced-motion fallback.
10. If a token doesn't exist, add it to `src/index.css` and `brand/tokens/colors.json` together — never hardcode a one-off hex.
